

## COB Industries to Introduce New Purge Monitor, Tungsten Grinder at Fabtech / AWS Show in Atlanta

**October 2010**—COB Industries is preparing for the upcoming Fabtech / AWS Trade Show which will be in Atlanta from November 2 – 4, 2010 at the Georgia World Congress Center, and is planning to unveil 2 exciting new products in the welding industry.

1. The new Critical Weld Purge Monitor is bound to generate a lot of excitement as the latest addition to the Argweld® line of purge monitors. This highly accurate monitor is designed to monitor oxygen levels down to 10 Parts Per Million (PPM) during the welding of titanium and ultra-pure stainless steel applications to prevent discoloring or adverse effects on the weld caused by oxygen. This unit is similar to the Argweld® Titanium Weld Purge Monitor with a few added features including an automatic pump for extracting a continuous gas sample where it is not possible to deliver a constant flow to the sensor.

2. The New TEG-III EXT Grinder is an improved model of the popular TEG-III Tungsten Electrode Grinder which now offers a vacuum dust extraction system to extract all of the dust from the electrodes which in many cases is carcinogenic. The TEG-III EXT is equipped with the most powerful motor of its kind with a lifetime warranty.

COB Industries' exhibit booth (#7632) has also received a makeover with all-new graphics, photos and displays and will be located in the welding section of the show in the North Hall of the World Congress Center.
